About Me

Cybersecurity graduate with a Professional Bachelor's degree in Applied Computer Science, specializing in cybersecurity. Experienced in practical cybersecurity concepts including penetration testing, vulnerability analysis, malware and forensic analysis, risk assessment, incident response, and security compliance. Skilled in secure software development, network security, threat intelligence, and data-driven security analysis. I bring a strong analytical mindset, attention to detail, and a practical cybersecurity approach to building and protecting reliable IT systems.

Skills

- Problem solving
- Analytical Thinking
- Attention to Detail
- Technical Communication
- Team Collaboration
- Adaptability

Education

- Bachelor of Applied computer science- Cybersecurity** 2022- 2026
Howest University of Applied sciences
I studied applied computer science with a cybersecurity specialization, including network security, ethical hacking, secure development, system administration, and threat analysis. Completed practical cybersecurity projects involving honeypots, vulnerability analysis, and security monitoring.
- RUN-EU Short Advanced Programme – Hack Your Device** 14th Feb 2025 – 14th March 2025
Vorarlberg University of Applied Sciences
I completed a RUN-EU cybersecurity programme focused on IoT security, threat diagnosis, vulnerability detection, and penetration testing. Worked in a team to assess an IoT device and communicate findings through a report and presentation.

Experience

- Cybersecurity Intern** Feb 2026 – May 2026
DNS Belgium
I worked on a cybersecurity research project focused on email honeypots and threat intelligence.

Projects

- Email Honeypot & Threat Intelligence System** 2026
Internship project
Designed and implemented a honeypot infrastructure to collect phishing and malicious email traffic using decoy domains, Postfix, Maildir, Python, PostgreSQL, dbt, and DuckDB. Extracted email metadata, attachments, and URLs for analysis and threat intelligence generation.
- Mobile Security Project** 2025
School/Personal
Developed a mobile application and analyzed its security through practical testing, vulnerability analysis, secure configuration, and privacy/security assessment.
- Web Honeypot Project** 2024
School/Personal
Built a web-based honeypot environment with intentionally vulnerable challenges such as SQL injection, XSS, and broken access control. Implemented logging to capture attacker behaviour and support security analysis.
