SUMMARY

Applied Computer Science graduate specializing in Cybersecurity with a passion for designing and developing reliable software solutions. I enjoy understanding complex problems, turning ideas into practical applications, and continuously improving systems through thoughtful analysis and collaboration. I approach development with curiosity, attention to detail, and a strong commitment to writing maintainable, high-quality software while always looking for opportunities to learn and grow.

EDUCATION

Applied computer science - Cybersecurity

Howest University of Applied Sciences
2022 - 2026

LANGUAGE

- English (fluent)
- Dutch (basic - Currently learning)

EXPERIENCE

Software development and cybersecurity intern

2026

DNS Belgium, Leuven

- Researched project requirements and contributed to defining the project scope, features, and development workflow before implementation.
- Configured and maintained the software environment required to support project objectives, ensuring reliable operation throughout the development lifecycle.
- Designed and developed backend data processing pipelines using Python, DuckDB, and dbt to collect, transform, and analyze research data efficiently.
- Developed and deployed responsive web applications using JavaScript, HTML, and CSS to support cybersecurity research initiatives.
- Collaborated with the team to discuss project progress, evaluate technical solutions, and identify opportunities for improvement.
- Performed testing, debugging, and iterative enhancements to improve software reliability, usability, and overall performance.
- Documented research findings, presented project outcomes to stakeholders, and contributed to the successful launch and deployment of project deliverables.
- Used Git and Agile development practices for version control, code reviews, and collaborative software development.

PROJECTS

Robot Rental Management Web Application

2024

(OMNIBOT)

Technologies: Java • Vue.js • JavaScript • HTML • CSS • npm • REST API • Git

- Developed a full-stack robot rental management web application, implementing both the frontend interface and backend business logic.
- Designed and implemented the backend in Java, managing product operations, business rules, and core application logic.
- Developed a responsive web application using Vue.js, JavaScript, HTML, and CSS for a robot rental management platform.
- Built reusable and interactive user interface components to deliver a seamless and intuitive user experience.
- Integrated REST APIs to retrieve and display dynamic application data.

SKILLS

Languages

- JavaScript (ES6+)
- Java
- PHP
- SQL
- Python
- Duckdb
- HTML5
- CSS3

Tools and Technologies

- Git
- GitLab
- npm
- Docker
- Postman
- Figma
- Laravel
- dbt

Scripting

- Bash
- PowerShell

Development Practices

- Responsive Web Design and wireframing
- REST API Integration
- Debugging and Testing
- Agile Development
- Secure Web Development
- Software design

Professional Skills

- Problem Solving
- Team Collaboration
- Communication
- Analytical Thinking
- Adaptability
- Continuous Learning
- Attention to Detail

- Managed project dependencies and development workflows using npm.
- Collaborated within an Agile team to design features, implement functionality, review progress, and deliver project milestones.
- Participated in testing, debugging, and continuously improving the application based on team feedback.

Web Honeypot API

2024

Technologies: Python • REST API • SQL • Git

- Designed and developed a RESTful API to support a web-based honeypot for cybersecurity research.
- Simulated common web application attack scenarios, including SQL Injection, Cross-Site Scripting (XSS), and Broken Access Control, within a controlled environment.
- Implemented request logging to capture and analyze attacker behaviour and interaction patterns.
- Evaluated observed attack techniques to support security analysis and improve understanding of web application threats.

Mobile Security Project

2025

Technologies: Kotlin • Burp Suite • OWASP • Mobile Security Testing

- Developed and evaluated a mobile application with a focus on secure software design and implementation.
- Performed vulnerability assessments using static and dynamic testing techniques.
- Reviewed application security, privacy configurations, and data protection mechanisms.
- Documented findings and proposed recommendations to improve application security and resilience.
